

## ABSTRACT

In an information display apparatus and a display method of the same displaying information transmitted from a network on a PC phone and a communication terminal using Internet protocol, information transmitted through a network is stored, is transmitted to an Internet phone when the Internet phone assumes an on-hook status, and is displayed on a display unit of the Internet phone. An information server of the information display apparatus broadcasts certain message information to Internet phones or PC phones, which each stores information transmitted from the network in its memory in order to display the information such as various advertisements, guides, bulletins, etc. on a display unit thereof. When the Internet phone assumes an on-hook status, the information stored in the memory of the information server is transmitted to the Internet phone, and is displayed on the display unit of the Internet phone.
